SUMMARY

Backend engineer with 3 years of production experience in Java, Kotlin and Spring Boot, working on payments and lending. At DataArt I built services for a consumer lender: bank repayments (~₸2B a month across 7 banks) are posted to the core banking system with no losses or duplicates (undelivered payments went from 84 a month to 0), ~96% of incoming payments are matched to contracts automatically, and a 22-minute operator query now runs in 7 ms. Outside my main job I led the backend of a marketplace startup from the first commit to production, working directly with the founder.

EXPERIENCE

Software Engineer (Java/Kotlin) — DataArt Sep 2025 – Nov 2026

Consumer-lending platform (fintech), Kazakhstan · Java 8/17/21, Kotlin, Spring Boot, Camunda, Kafka, PostgreSQL

- Made bank-repayment posting to the core banking system idempotent (~230 payments/day, ≈₸2B/month; 7 bank integrations) via a pre-call status state machine, idempotency keys with lookup-before-retry and advisory locks — undelivered payments cut from 84/month to 0, zero double postings.
- Raised automatic payment-to-contract matching to ~96% with a matching cascade (contract number → restructuring chain → transliteration → national ID → guarantor), shared by all bank connectors (–1,000 duplicated lines).
- Halved the nightly debt-collection batch (40 → 20 min; 4.6M rows, ~164K contracts) by replacing a JPA read-map-write step with a server-side *INSERT…SELECT* (step 23 min → 40 s, 35×); fixed Spring Batch jobs stalling after deploys (manual reruns 90+ min → ~3 min).
- Cut a critical operator-screen query from 22 min to 7 ms by rewriting a correlated subquery and adding an index built with *CREATE INDEX CONCURRENTLY* (zero downtime); made *lock_timeout*-guarded migrations a team practice.
- Built features in a Camunda + Kafka loan-origination pipeline (~60K applications/month, 15 dealer groups): a new partner channel, collateral products and regulator-mandated credit-bureau reporting (REST/SOAP) via a persistent retry queue with 100% delivery.
- Moved deployments to Docker and GitLab CI/CD, investigated production incidents (Kafka consumer lag, OOM), built React/TypeScript internal tools and ran technical interviews for Java candidates.

Middle Java Developer — MagnumGO Nov 2023 – Sep 2025

Grocery delivery app of Magnum, Kazakhstan's largest grocery retail chain · Java 17, Spring Boot, PostgreSQL, Redis

- Built the inventory (stocktaking) service for dark stores that records stock counts and reconciles them with system balances.
- Developed order, subscription and payment services and their REST APIs; optimised slow PostgreSQL queries, tuned connection pools and added Redis caching on the busiest endpoints.

Junior Java Developer — inDrive (Space Lab) Oct 2022 – May 2023

- Built a social-impact service as part of a team: REST endpoints and service/repository layers in Spring Boot, Spring Data JPA and PostgreSQL with unit tests, in Agile sprints with code review by inDrive engineers.

PROJECTS

Nanny booking marketplace — Lead Backend Engineer (side project) Jul 2025 – Present

Two-sided marketplace for parents and nannies, live in Kazakhstan · Java 17, Spring Boot 3.5, PostgreSQL 16, MinIO, Docker, GitLab CI

- Led backend development from zero to production launch: turned the founder's requirements into the domain model, API contracts and release plan; coordinated scope and trade-offs with the client and the Flutter/Vue developers.
- Designed the architecture and wrote ~86% of the code: 116 REST endpoints, booking within a 5 km radius, nanny verification, geofenced check-in, wallet, push notifications, ~200 Testcontainers tests.
- Built Kaspi payments (invoice + webhook) with idempotency, HMAC checks and row locking; set up CI/CD, backups and logging; ran the pre-launch security audit (~25 P0/P1 fixes in a day).

SKILLS

Languages: Java (8–21), Kotlin, SQL

Backend: Spring Boot, Spring Data JPA / Hibernate, Spring Batch, Spring Security, Camunda BPM, REST/SOAP

Data & messaging: PostgreSQL (query tuning, indexing, locking, Flyway), Redis, Kafka

Infrastructure & quality: Docker, GitLab CI/CD, AWS, nginx, Grafana / Loki, JUnit 5, Mockito, Testcontainers

Additional: TypeScript, React (Vite, TanStack Query, Zod), Flutter / Dart (Riverpod), Spring Modulith, Firebase Cloud Messaging, Claude API

EDUCATION, CERTIFICATIONS & AWARDS

BSc in Software Engineering — International Information Technology University (IITU), Almaty · taught in English 2021 – 2025

Certifications: AWS Certified Developer – Associate (2026) · Claude Certified Developer: Foundations, Anthropic (2026) · React Developer Qualification, DataArt (2026)

Hackathons: 2nd place, Halyk Bank OIY (2023) · Finalist, Astana Hub hackathon (2023) · 3rd place, QurItAI by MOST IT Hub (2024)

Languages: English — C1 · Russian — C2 · Kazakh — native
